Abstract (en)

[origin: WO2011061344A1] A method for installing a collapsible beverage container (28) in a beverage dispensing system (10) comprises the steps of providing the beverage dispensing system including an inner space (32) and defining an concave surface, an open upwardly facing curved rim (62) and a closed downwardly facing end. The rim defines a contact surface (60). The collapsible beverage container (28) defines a cylindrical body (44) fitting inside the inner space, a convex shaped first end (42) and a convex shaped second end. The method further comprises performing the steps of positioning the collapsible beverage container in a sloped first position, pivoting the collapsible beverage container from the first position in a rotational motion around the contact surface (60) to a second position, and sliding the collapsible beverage container on the contact surface and on the concave surface from the second position to a third position inside the receptacle.
