Abstract (en)
[origin: WO2011064318A2] The invention relates to a roller blind device having axially adjacently disposed roller blinds (1) that can be rolled together on to and off of a winding roller (10), an intermediate roller blinds (7) being disposed between said blinds and that can be rolled on and off with the roller blinds (1), covering a gap (13) arising between the roller blinds (1) in the lowered position. The invention proposes that a roller bar (2) is disposed at the free end of the roller blinds (1) for supporting winding rollers (71) for the intermediate roller blinds (7).
