Abstract (en)
[origin: WO2011063964A1] An electrical switch, in particular a rocker or toggle switch, comprises a manually operable operating part (12) which is mounted such that it can be rotated or pivoted and can be deflected from a neutral position to an operating position. The electrical switch furthermore comprises an electrical switching element (16), which can be operated mechanically, and an operating element (22) which acts on the switching element (16). The operating element (22) is coupled to the operating part (12) and to the switching element (16) such that a rotary or pivoting movement on the operating part (12) from the neutral position to the operating position is converted to a substantially linear movement of the operating element (22).
