Abstract (en)

[origin: WO2011064510A1] The present invention relates to an electric switch (10) including a hollow body (12) defining a cavity (14), an actuator (16), and a slide (18) mounted in said cavity (14). Under the action of the actuator (16), the slide (18) is suitable for moving from a first position, in which at least one conducting portion (19) of the slide (18) is electrically connected to at least two primary electrically conductive contacts (20a, 20b) leading laterally into said cavity (14) by a breakable permanent electric junction, into a second position, in which at least one of said primary electrically conductive contacts (20a, 20b) is no longer electrically connected to said conducting portion (19) of the slide (18).
