Abstract (en)
[origin: EP2505705A1] First pattern data (40) based on the finished size of each part of a knitted fabric is generated, and the first pattern data (40) is converted to second pattern data (50, 60, 70, 84) representing the size in proportion to the number of stitches. Raster data representing the part in stitches is generated by converting the second pattern data (50, 60, 70, 84) to data expressed in the number of stitches of the part and forming a shaping line (71, 72, 86) at a side end of the part. Accordingly, a configuration is obtained in which data expressed in stitches reflecting the finished size of the knitted fabric is easily obtained.
