Abstract (en)

[origin: EP2505746A2] The handle (1) has a housing (2), which is connected with a shaft rotatably mounted in a lock cylinder. The housing has a retainer (6) for a particular replaceable cylindrical battery (7). The housing at its end has an opening (4) for the retainer, which is closed with a closure element (5). A sealing element (10) made of thermoplastic elastomer or silicone is provided, which is inserted into the retainer independent of the closure element. The sealing element is compressed with the closure element in a sealing manner, when the closure element is connected with the housing in the retainer. An independent claim is included for a method for manufacturing a handle.
