Abstract (en)

[origin: EP2505943A2] The refrigeration device (10) has an upper cooling tray (11) and a lower cooling tray (13) which are designed to be open in the upward direction. A support structure (22) is provided, in which the cooling trays are movably mounted between a closed state and an open state. A lid (46) is associated with the lower cooling tray, and closes the lower cooling tray from above. An intermediate base (44) is designed as a part of the support structure, and is thermally insulated.
