Abstract (en)

[origin: EP2505953A1] The device (1) has a retaining arm (102) carrying an attachment unit on an end and comprising a support surface (4) for supporting a ballistic protection screen (103). A wedge is secured to the surface, and a rapid clamping unit (2) clamps the wedge on the screen. The screen is pinched between the surface and the wedge after clamping. The surface includes width greater than distance between successive rigid bars (103a, 103b) of the screen. The wedge includes sufficient length to be applied on the bars. The wedge pivots with respect to the surface while having width less than the distance.
