Abstract (en)

[origin: EP2506284A1] The strip has clamping contacts (2, 3) for receiving low voltage high power-fuse inserts integrated in a self-supporting two-part housing. The inserts are connected with a bus bar-connecting lug of the clamping contacts. The housing is vertically divided such that plug-in modules (13) for receiving the clamping contacts are arranged in housing halves (11). A phase connecting rail for electrical connection with the clamping contacts is arranged in a side wall. Vertical bars are formed at the housing halves and form separation walls in a mounted condition.
