Abstract (en)
[origin: CA2782755A1] The invention relates to a jigsaw puzzle having at least one puzzle piece (10) that can be bent at along at least one predefined bending line (22), which has an upper face (12) and a lower face (14) and a puzzle piece thickness extending between the upper side (12) and the lower side (14) which is reduced from an inner side of a bend along the or each bending line (22). In order to neutralise the resilient restoring force that acts in the bent state, on each side of each bending line (22) there is a fixing device (40) which releasably fixes a desired bending angle, each fixing device (40) having at least one recess (42) into which a corresponding protrusion (44) engages in a clamping and/or latching manner when the puzzle piece (10) is bent.
