Abstract (en)

[origin: WO2011067257A1] The invention relates to a method for activating and/or actuating at least one reversible restraint device (16) depending on a danger situation that is detected ahead of time, wherein the danger situation is detected ahead of time by evaluating sensor signals that are provided by at least one sensor unit (14, 15), and to an evaluation control unit (12) for carrying out the method, and to an occupant protection system (3) comprising such an evaluation and control unit (12). According to the invention, such a danger situation is detected when it is found, by evaluating the sensor signals, that the vehicle has left the lane, wherein a direction angle is determined, at which the vehicle has left the lane, and wherein the at least one reversible restraint device (16) is activated and/or actuated depending on the determined direction angle.
