Abstract (en)
[origin: WO2011067731A2] The invention discloses a container evacuation arrangement, which includes a flexible container constructed of at least two layers, each consisting of four polygonally shaped sheets and having a first flexible pocket adapted to receive a flowable material, a second flexible pocket in sealed fluid communication with the first flexible pocket. The first flexible pocket has an inlet and/or funnel and a drain, while the second flexible pocket is provided with a fill port. The flexible container is supported by a rigid frame.
