Abstract (en)
[origin: WO2011063855A1] In an assembly for stacking, grouping, and or further conveying papers, documents, sheets, et cetera in a paper processing device, a feed device (11', 11'') is provided in order to accept papers (17) or documents and to feed said papers or documents to a storage surface (P') for temporarily storing the papers, documents, or sheets. In order to then further feed the stored, stacked sheets or a produced paper stack of one or more sheets to a device for further processing, for example a folding device, enveloping device, or additional grouping device, a device for further transport (13', 13'') is provided. The device for further transport (13', 13'') is movably arranged relative to the feed device (11', 11'') according to the size or the format of the paper to be collected or stacked.
