Abstract (en)

[origin: WO2011064387A2] The invention relates to a method for the electroless deposition of metals or metal oxides, wherein particle formation is prevented and smooth layers are formed. With this, layer thicknesses of 1 nm to 500 nm are achieved at temperatures between 0 and 100°C. A composition of a plurality of layers is possible. The layers can be shaped by means of templates or printing, for example ink jet printing technique and screen printing.
