Abstract (en)
[origin: WO2011067151A1] The invention relates to a bearing arrangement, comprising a bearing support (2) having at least one recess (3) for at least one outer ring of a bearing (5) and at least one bearing (5). According to the invention, in order to prevent the bearing outer ring from undesirably rotating in the bearing support, said outer ring of the bearing (5) comprises a recess on at least one circumferential point and an engaging element (8) is arranged on or in the bearing support (2). Said engaging element (8) engages in the recess in a form-fitting manner when the bearing (5) is mounted in the bearing support (2) for securing the outer ring from rotating in relation to the bearing support (2).
