Abstract (en)
[origin: WO2011067293A1] According to the invention, a luminaire is provided which has a housing (4) with a light outlet opening (6) for emitting light, and a transparent light outlet element (8) for covering the light outlet opening (6). The housing (4) comprises a retaining element (14) for retaining the light outlet element (8) on the housing (4), said retaining element being movable back and forth between a retaining position in which said element retains the light outlet element (8) and a release position. The luminaire further has a support unit (16) for movably supporting the retaining element (14) on the remainder of the housing (4), said unit being designed such that the retaining element (14) first moves linearly along an axis (A) in order to move from the retaining position into the release position and can then be rotated about the axis (A).
