Abstract (en)
[origin: EP2327933A1] The arrangement has a fuel distributor ring (27), and fuel nozzles mounted in a flow direction at the fuel distributor ring. The fuel distributor ring comprises an annular surface (54) in the flow direction. The ring has an exterior inner side (56) and exterior outer side (58), where the inner side is pointed towards middle of the distributor ring, and the outer ring lies opposite to the inner ring. A slot (60) is provided on a surface between the fuel nozzles. The ring is heated at the outer side by cold fuel with 20 degree Celsius and comprises nickel alloy or nickel molybdenum alloy.
