Abstract (en)
[origin: WO2011066910A1] The invention relates to a combined breech and ammunition drive (5, 6) for the breech (2.1) of a weapon (1) and/or for introducing ammunition (3) by means of a feeding star (19) using an external drive (11), wherein the respective drive (5, 6) is selectively engaged and disengaged. A selector drum (12) that interacts with the drives (5, 6) has slots (15, 16) for the selective engagement and disengagement, and elements (13, 14) are guided in the slots (15, 16), said slots moving means (17, 18) which engage into the drives (5, 6) in a form-fitted and force-closed manner and which can thereby engage and disengage same. Said means (17, 18) are 3-way jaw clutches for example.
