Abstract (en)
[origin: WO2011067019A1] The invention relates to a flexible circuit board (1), comprising at least one conductive path (2) and a shell (3) that at least regionally surrounds the conductive path (2), wherein at least one adhesive layer (4) is provided between the conductive path (2) and the shell (3) for fastening the shell (3). To this end, a cover (8) is provided, which envelopes the shell (3) at least regionally, wherein between the shell (3) and the cover (8) at least one filler layer (9) is provided. The invention further relates to an electric device (20).
