Abstract (en)

[origin: EP2508103A1] The support (6) has a tub-shaped seat shell (8) provided for fastening a seat support portion (7). The seat shell provides a receiving space (9) for temporary retaining of a flexible seat surface (17) of the seat support portion. The receiving space extends over the entire seat shell. The seat support portion comprises a resilient plate (18) provided in a region of the seat surface with multiple openings (19). The seat support portion is supported in an automatic manner. The support is designed as a single part. Independent claims are also included for the following: (1) a seat for a chair (2) a chair comprising a seat mechanism.
