Abstract (en)
[origin: EP2508306A1] The box (1) has a closure device including a housing upper part (2) and a housing lower part (3) pivotably coupled with each other around a rotational axis (5). A support (8) is arranged at the housing lower part and pivoted relative to the housing lower part. The support supports the housing lower part in a supporting position. A pivot axis (9) of the support runs parallel to the rotational axis of the box. The support is lockable in a folding position and/or a use position by a form-fit connection. The support is fixed in the folding position by a pedestal (11).
