Abstract (en)

[origin: EP2508465A1] The truck has load supporting unit that is movably mounted along the mast. A common throttle valve (36) is provided for descending the free lift cylinders (10) and mast lift cylinder (12). A sensor is provided for detecting the transition of mast lift from the free lift. A controller is provided for controlling throttle valve in response to detection of transition of the free lift from the mast lift, such that lowering speed of free lift cylinders corresponds to that of mast lift cylinder.
