Abstract (en)
[origin: EP2508467A1] The apparatus (A) has an articulated base (B) comprising a fixed leg and pivoting legs pivoting with respect to a plate along an axle defined by bolts. A telescopic mast (M) is inserted into the base. The base has housings (1, 2) forming a cross-section to receive the telescopic mast for allowing different angular orientations of the telescopic mast at 90 degrees with respect to the articulated base so as to provide different ergonomics based on utilization such as doorways, installation of small plates, standard pose and crawling pose.
