Abstract (en)

[origin: EP2508675A1] The device has a controlling system extended along a travel path of a web, where a nozzle (16) of a nozzle device (15) is protruded into the mixing chambers (20). A fluid jet (21) forms a propulsion jet, which accelerates a suction medium in the respective mixing chambers. A suction flow (25) for controlling an air flow (26) is carried out by the suction medium in an area between the gas flows (17,19). The former gas flow is generated by the nozzle opposite to a conveying direction (L) of the web material. A negative pressure is created at the top of the controlling system by the suction flow.
