Abstract (en)
[origin: EP2508796A2] The device has a lighting device (1) e.g. LED and an organic LED (OLED), arranged on a circuit board (2) that is equipped with components (5) to be required for function. A light emitting region (4) is centrally located at a main surface of a housing (3), where light generated by the lighting device is emitted to an outer side through the light-emitting region. The lighting device and the components are arranged on an outer edge area of a main surface of the light emitting region. The housing is completely formed from a casting material that completely encloses the circuit board.
