Abstract (en)
[origin: WO2011069819A1] The invention relates to a handpiece (10) for a steam jet device having a housing (12) which has an inlet (24) for a feed line and an outlet (48) for a discharging line and in which a metering valve (32) is arranged with a valve housing (34), in which a valve body (52) is mounted which can be displaced to and fro linearly in a displacement direction, wherein the valve body is coupled to an actuating member (78) which is held movably on the housing and can be moved by the user counter to the action of a spring force. In order to develop the handpiece in such a way that it makes particularly sensitive metering of the steam discharge possible, it is proposed according to the invention that at least one spring element is arranged laterally next to the valve housing (34), which at least one spring element loads the valve body (52) with a spring force which is oriented parallel to the displacement direction.
