Abstract (en)

[origin: WO2011070232A1] In the method and the press brake the faces (1), the lower beam (2) and the upper beam (3) are assembled from separate plate, plate pile and/or bar parts including tensile elements mainly receiving tensile load, press elements receiving press loads, and transmission elements between tensile elements and press elements in order to transmit forces there between. The tensile elements, the press elements and the transmission elements are connected to each other by mechanical connection elements without welding.
