Abstract (en)

[origin: WO2011069573A1] The invention relates to a system for producing and processing stacks of sheets (8) by means of a stack-producing machine (1, 10), which has the following characteristics: at least one unrolling device (2) for unrolling rolls made of web-shaped material, in particular made of paper, a longitudinal cutter (4) for cutting the webs (3) into longitudinal strips (5), - a transverse cutter (6) for dividing the longitudinal strips (5) into sheets (7), a device for forming stacks (8) from the sheets (7), and a discharge conveying device (9, 19) for conveying the formed stacks (8) to a subsequent processing machine (21, 22), wherein two substantially identically constructed stack-producing machines (1, 10) are arranged next to each other in parallel, and each of the discharge conveying devices (9, 19) for the stacks of the two machines (1, 10) is designed such that it can be connected to the discharge conveying device (19, 9) of the other machine (10, 1) or to a common discharge conveyor (20) for both machines (1, 10).
