Abstract (en)

[origin: CA2783747A1] The invention relates to a fabric strip for a machine for producing web material, in particular paper or carton, comprising a first fabric layer (114) on the web material side and a second fabric layer (116) on the machine side, wherein the first fabric layer (114) and the second fabric layer (116) each have a base weave, connected to each other by binding threads (i1-i20) extending in a binding thread direction, having base binding threads (1-50, 118, 120) extending in the binding thread direction and crosswise to the binding thread direction, wherein the binding threads (i1-i20) form binding segments (S2) which are successive in the binding thread direction in the second fabric layer (116) and in which the binding threads (i1-i20) are set on at least one base binding thread of the second fabric layer (116) extending crosswise to the binding thread direction, wherein the binding segments (S2) formed in the second fabric layer (116) are arranged in a binding pattern repeat extended in the binding thread direction and crosswise to the binding thread direction along at least one binding segment diagonal (D) running skewed to the binding thread direction and crosswise to the binding thread direction.
