Abstract (en)

[origin: WO2011069820A2] The invention relates to a steam removal system (2) for household and industrial appliances, which can be connected to a pressurised steam container (4) and comprises two parallel flow channels (8, 10) that are used to remove steam from the pressurised steam container (4) and can be opened and closed by a double-action valve unit (12). The invention also relates to a steam station comprising such a steam removal system (2), and a valve unit for steam removal. The invention is especially suitable for reliably providing pulsed steam shocks in steam pressing stations or steam cleaning appliances.
