Abstract (en)
[origin: WO2011069568A1] The present invention relates to an electrical plug contact, comprising - a line having an insulating section, a fastening section, and a contacting section, - a line shield that at least partially encloses the line, - a connector that electrically contacts the line at the end of the line in the contacting section, - an insulating retainer, which locks with the connector and which is arranged in the contacting and fastening sections, for insulating the connector from an electrically conductive housing, and - a secondary locking sleeve that at least partially surrounds the line in the fastening section and that can be fastened to the line, wherein shielding transfer means are provided in order to transfer the shielding from the line shield to the housing.
