Abstract (en)

[origin: EP2511015A2] The device has several nozzles for spraying the surface of belt with fluid, and a control unit for temporary supply of each nozzle with the fluid. Each nozzle is supplied with fluid in the direction of longitudinal axis of nozzle tube extending in or on the nozzle pipe arranged channel arranged at one end of inlet opening for fluid and at other end of nozzles. A control slot for controlling intermittent supply of fluid to each nozzle is extended in the circumferential direction over partial circumference and in the longitudinal direction over partial length of nozzle pipe.
