Abstract (en)

[origin: EP2511019A2] The device has an outer unit comprising firmly connected parts, and steel wire brushes (13) held in a movable indoor unit by retaining boxes. Contact pressure regulating adjustable springs (14) are pushed to a continuous wire (15) to be cleaned. The springs are moved back and forth at the continuous wire with simultaneous continuous washing of the wire brushes with jetting water. The wire brushes are supported on outer lateral plates (1, 2) by a round bolt, where the lateral plates are held together by clamping bolts (7). The wire brushes comprise central recesses.
