Abstract (en)

[origin: EP2511194A2] The film cartridge (100) has a film hose that surrounds a chamber (110,112) in a circumferential direction and a cover (116) that is separated from the film hose. The cover closes an axial end of the film hose. An opening (118) is formed within the cover for the chamber. The chamber is filled with a filling material by the opening. A closure (136) closes the opening. Multiple chambers are separated from one another by a subdivision of the film hose in axial direction. An independent claim is included for a method for manufacturing a film cartridge.
