Abstract (en)

[origin: EP2511211A2] The junction (10) has a switch-transfer device (15) for transferring products from transport path (11) to transport path (12). The switch-transfer device transports the products freely on transport paths in one setting and deflects the products from one transport path to another in another setting. The deflecting section (25) of switch-transfer device is formed in curve shape and provided with a movable free end (16). The deflecting section is deflected at a distance from one transport path in one setting and engaged with one transport path in another setting.
