Abstract (en)

[origin: EP2511228A1] The device (1) has positive displacement pump (5) to convey fluid material from material container (2). A computing unit (8) calculates actual value of density of material in container, based on level of material in container and capacity of container. An input device (9) inputs density target value of material in container. A control device (7) controls conveying speed of material from container based on density target value. A display device (10) displays differences between density actual value, density target value and density reference value, respectively.
