Abstract (en)

The present invention concerns an innovative base (1) on which to erect a structure (100), preferably an anti-noise barrier (100). The said base comprises at least a plinth (2) on which a beam (5) results arranged configured to form a support base for holding the structure (100). In accordance with the invention, the base (1) further comprises an impact-absorbing element (11, 12) arranged in such a way as to result at least on the edge or projecting externally with respect to the more external profile of the plinth that holds the base in such a way as to impede direct impacts against the base itself.
