Abstract (en)
An automated teller machine (ATM) comprising receiving means (18) for receiving a cash cassette (50); control means (22) for receiving commands issued by a remote system; and optical communication means (30; 32; 34; 36) for communicating with a cash cassette (50) received in the receiving means (18), wherein the optical communication means (30; 32; 34; 36) is operative to issue commands to the cash cassette (50) in accordance with the commands received by the control means (22) from the remote system; and wherein the optical communication means (30; 32; 34; 36) is moveable between an active position, in which the optical communication means is able to communicate with complementary optical communication means of a cash cassette (50), and an inactive position, in which the optical communication means of the ATM does not impede removal of a cash cassette from the receiving means (18).
