Abstract (en)  
[origin: EP2511983A1] The cable lug has an insulation sleeve (6) comprising accommodating section e.g. crimp sleeve and ferrule, for fastening a stripped electrical conductor (3) of a cable with a contact section (5) i.e. eyelet. A flat limit stop carrier (8) is fastened at the contact section and forms a stop (7). The stop extends in an angle of 70 to 110 degrees to a longitudinal axis of the accommodating section. The carrier and contact- and accommodating sections are integrally formed. The carrier is arranged in a common plane with the contact section. The sleeve with an end is arranged against the stop. An independent claim is also included for a method for fastening a cable lug at an electrical conductor.
