Abstract (en)
[origin: WO2011079332A1] The invention relates to a shoe (1), in particular an alpine ski shoe, comprising a substantially dimensionally stable sleeve (4) that extends from a fixing means (6) on an upper (1) into a calf region of a user. An insert part (2) is provided which expands in the shape of a wedge at least along some areas from the lower end of said insert part, said lower end being provided for arranging in the sleeve (4), to the upper end of said insert part, and which is provided for receiving in a calf section (4') of the sleeve (4). The sleeve (4) has a material recess (7) in the calf section (4') which is provided for receiving the insert part (2), said wedge-shaped insert part (2) being at least partly received in the material recess in a lower position. In an upper position, the insert part (2) is arranged such that the material recess (7) is bridged by the insert part (2) to form a hollow chamber.
