Abstract (en)

[origin: WO2011082944A1] The invention relates to an individually positionable deposit surface (1) as a cup holder above a sandy subsurface, comprising a two-part system, wherein a substantially straight mandrel (1) is provided, having an upper (1b, 1d) and a lower (1a, 1c) section. The lower section (1a, 1c) is adapted for turning or inserting into the sandy subsurface, and at a certain height above the lower section the straight mandrel (1) has a cross-shaped structure (4) that is suitable as a support for a tray-like deposit surface (5). The tray-like deposit surface (5) comprises an opening (5a) that is slid over the upper section (1b, 1d) of the mandrel (1) so as to rest on and be fixable to the cross-shaped structure (4).
