Abstract (en)
[origin: WO2011072920A1] The present invention relates to a windshield wiper device (1) for a motor vehicle, having a wiper motor, which can be fastened via a transmission housing (2) connected to the wiper motor to a vehicle body of the motor vehicle by means of a motor plate (3), the wiper carrier (4) being held clamped between the transmission housing (2) and the motor plate (3), wherein at least one protrusion (10) is provided on the motor plate (3) and/or the transmission housing (2) and is arranged such that it rests against the wiper carrier (4) forming a form-fitting connection.
