Abstract (en)

[origin: WO2011072776A1] The invention relates of a wiper arrangement (48) with an associated windscreen washing system for a motor vehicle. The windscreen washing system comprises a washing liquid supply pipe (14) leading to outlets. The outlets are preferably arranged on the wiper blade (16, 26) and can consequently be moved together with a corresponding wiper arm of the wiper arrangement (48). A coupling part (52), by means of which the wiper blade (16, 26) is connected to the respective wiper arm, and which moves with the wiper arm as the latter moves, has switching valves. The discharge of washing liquid from the outlets can be controlled by means of the switching valves. Furthermore, the invention relates to a method for operating such a wiper arrangement (48).
