Abstract (en)
[origin: WO2011080435A1] To compensate a lost value for torque produced by an internal combustion engine (1) for drawing a vehicle, the method is characterized in that a compensation torque value is determined by modulating said lost value by means of a compensation rate according to a function of a set including at least one vehicle status variable. Said method is moreover characterized in that an electrical machine (3) is controlled so as to provide a compensation torque having the thus-determined value.
