Abstract (en)
[origin: WO2011073598A1] The invention relates to a device for cleaning a surface submerged in a liquid, comprising: a hollow body; guiding members (5, 6) defining at least one axle; a filtration chamber; at least one driving electric motor; and a control unit (4) configured to control each driving motor in at least one direction at a speed selected from: at least a first speed at which the device occupies a first attitude moving along a pre-determined first path; and at least a second faster speed at which the device occupies a second nose-up attitude moving along a second pre-determined path different from the first.
