Abstract (en)

[origin: WO2011082767A1] The invention relates to a locking device (1) for locking a key (10) on a lock cylinder (11), said locking device (1) being designed for being arranged on the lock cylinder (11) and extending around a lock cylinder axis (12). A blocking element (17) is provided, said blocking element being engageable with the key (10) to lock the key (10) in the key removal position. According to the invention, the locking device (1) has a sliding element (13) which is movable in a transversal and spaced manner with respect to the locking cylinder axis (12) and which interacts with the blocking element (17) when manually pressed in a tangential direction with respect to the lock cylinder (11) such that the key (10) can be disengaged.
