Abstract (en)

[origin: WO2011082890A2] The invention relates to a method for determining the displacement of a radial piston machine (1) having adjustable eccentricity e , having cylinders (2) arranged in a pivoting manner and having a drive shaft driving an eccentric (5), wherein the rotation angle of the drive shaft is designated by α and the pivoting angle of the cylinder (2) is designated by β . According to the invention, the pivoting angle β is measured and from the measured values for β the eccentricity and hence the displacement are calculated.
