Abstract (en)

[origin: WO2011072793A1] The invention relates to a battery case (1), which comprises a deformable lateral wall (2). The battery case (1) is provided to receive at least one electrochemical energy storage device (3). An electrochemical energy storage device (3) comprises a cell frame (4), which partially surrounds the device (3) and in some areas forms the outer wall of the battery case (1). The battery case (1) also comprises a case cover (5), by which at least one electrochemical energy storage device (3) can be electrically contacted. A lateral wall (2) forms at least in some areas the outer wall of said battery case (1), wherein the stiffness of said lateral wall (2) is less than the stiffness of the cell frame (4). When there is a pressure difference between the inner space of the battery case (1) and the environment around the battery case (1), the lateral wall (2) is therefore deformed and the volume of the battery case (1) increases. Said lateral wall (2) is connected at least in some areas to said cell frame (4) in a gas-tight manner.
