Abstract (en)

[origin: WO2011072909A1] The invention relates to an electric contact (1) for plug connections, in particular for directly contacting contact surfaces (2) of a printed circuit board (3), comprising a contact housing (4) that has a primary lance (6), which protrudes outwardly beyond the contact housing (4) counter to the insertion direction (5) and can be deflected inwardly, for retaining the contact (1) inserted into a contact chamber of a mating connector. According to the invention the primary lance (6) has a free lance end (8) that is offset inwardly in relation to the lance section (7) thereof protruding outwardly and that extends counter to the insertion direction (5), a housing stop (9) of the contact housing (4) extending over said free lance end.
