Abstract (en)

[origin: WO2011073090A1] The invention relates to a method for producing an interconnect device (10), wherein at least one connecting means (1) for connecting the contact surfaces (12) to components is applied in the region of contact surfaces (12) by means of a template (15; 15a; 15b) comprising penetrations (16; 16a to 16d), wherein the at least one connecting means (1) is introduced from the side of the template (15; 15a; 15b) opposite the interconnect device (10) into the penetrations (16; 16a to 16d) of the template (15; 15a; 15b), in particular by using a doctor blade element (20). According to the invention, the bottom side (18) of the template (15; 15a; 15b) is disposed at a distance to the contact surfaces (12) of the interconnect device (10).
